

PROMOTES HEALING, RELIEVES SUFFERING AND PROVIDES HOPE

Seventeen years ago Dr. Tony Warren, an extraordinary Physician and Critical Care Specialist with Harbin Clinic, identified a need for patients. In conjunction with Floyd Medical Center, they realized there were patients too sick to go home or to a nursing facility after their stay at an Acute Care Hospital. Thus the LTCH (Long Term Care Hospital), named the Specialty Hospital was born, which today is Kindred Hospital Rome.

What began as a small twelve bed unit on the third floor of FMC, blossomed into the present day Kindred Hospital Rome. It is a modernized healthcare facility, fully capable of managing the most complex patients that need extended medical Care. The present hospital has forty-five all private rooms, consisting of twelve ICU, fifteen Step Down and eighteen Medical Surgical beds.
